

FLOATING OPTICAL CARRIER

ABSTRACT OF THE DISCLOSURE

5 An apparatus and method for aligning one or more optical fibers is disclosed. The apparatus includes a carrier having one or more through holes and one or more plugs, each of which is sized to be received in one or more of the three or more through holes. The carrier is adapted to receive one or more waveguides. The waveguides may be aligned by inserting a plug into each of one or more through holes in a carrier; attaching a waveguide to the carrier; aligning the carrier to align the one or more waveguides with respect to an optical device attached to a
0 substrate; and tacking one or more of the plugs to the substrate to maintain the alignment of the waveguides with respect to the optical device.
